PROFILE

Backend and full-stack engineer with 6+ years designing and delivering distributed systems, microservices platforms, and production AI/LLM integrations. Strong problem-solving and system design background — experienced making architectural trade-offs across scalability, reliability, and data integrity in enterprise and SaaS environments. Hands-on with LLM APIs, AI agents, and intelligent workflow automation in production — from agentic orchestration with Claude API and MCP Servers to LLM-powered ops tooling. Actively uses AI-assisted development workflows (Claude Code, GitHub Copilot, Windsurf) as core engineering practice.

SKILLS

Languages: Java (8–17), TypeScript, JavaScript (ES6+), Python, SQL, Bash

AI & LLM: Claude API (Anthropic), n8n agentic workflows, MCP Servers, tool/function calling, prompt engineering, LLM orchestration, Claude Code, GitHub Copilot, Windsurf, Gemini API (familiar)

Backend & Design: Spring Boot, Spring MVC, REST APIs, Microservices, Distributed Systems, Event-driven Architecture,DDD, SOLID, Design Patterns

Messaging: Apache Kafka, RabbitMQ, SQS, Zookeeper

Databases: PostgreSQL, MySQL, MongoDB, Redis, Oracle, Elasticsearch, Apache Druid

Cloud & Infra: AWS (EC2, S3, SQS, Lambda), GCP (Cloud Run, Secret Manager), Docker, Kubernetes, Helm, Terraform

Observability & Testing: Datadog, Prometheus, Grafana, Splunk, JUnit 5, Mockito, k6, Playwright, SonarQube

DevOps & Tools: GitHub Actions, Jenkins, Maven, IntelliJ IDEA, JIRA, Git

EXPERIENCE

Lead Software Engineer | [UKG \(Ultimate Kronos Group\)](#)

Jan 2025 – Present | Pune, India

- Designed and built production AI agent workflows using Claude API + MCP Servers + n8n, orchestrating multi-step LLM-driven processes to intelligently automate manual operational tasks — integrating tool calling, fallback strategies, and observability for non-deterministic AI outputs in a regulated enterprise environment.
- Built a Java-based deployment platform for microservices on GCP Cloud Run; implemented GitHub Actions CI/CD pipelines with Dockerfiles across 4 environments — automated builds, validation, smoke tests, and k6 performance gates — improving release quality and deployment confidence.
- Centralised secrets management in Google Secret Manager; enforced least-privilege access, rate limiting, input sanitisation, and audit-ready logging — meeting enterprise security and data integrity standards.
- Led schema and ER design for core backend services; applied performance-oriented indexing strategies and made architectural trade-offs balancing query performance, data consistency, and scalability.
- Actively leverages AI-assisted development workflows (Claude Code, GitHub Copilot, Windsurf) to improve engineering productivity and code quality across the team.

Software Engineer | [Healthkart](#)

Oct 2022 – Dec 2024 | Gurgaon, India

- Designed and maintained Spring Boot microservices and REST APIs serving 2M+ MAU; applied DDD and SOLID principles across service boundaries, with service discovery via Eureka and OpenFeign for clean inter-service contracts.
- Implemented Redis caching and Elasticsearch-based querying to meet strict non-functional performance requirements; integrated Kafka event pipelines with idempotent consumers and dead-letter handling for reliable real-time notification delivery.
- Processed large-scale datasets using Apache Spark and Apache Druid for analytics use cases; designed data flow architecture transforming raw event streams into structured business insights.
- Maintained CI/CD pipelines with JUnit 5, Mockito, and SonarQube quality gates; participated in design reviews, code reviews, and agile ceremonies across full delivery lifecycle.

Senior Software Engineer | [Mahindra Comviva](#)

Dec 2019 – Oct 2022 | Bangalore, India

- Built backend-heavy features for a distributed B2B loyalty platform (Java/Spring Boot, Oracle/MongoDB) with complex third-party integrations via REST and MQ; applied Factory, Strategy, and Singleton design patterns for maintainable, extensible service architecture.
- Managed schema versioning and production release migrations using Liquibase in a compliance-sensitive enterprise environment; maintained full technical documentation on Confluence and supported all testing phases including unit, integration, and UAT.

EDUCATION

Certificate Programme in Applied Data Science & AI | IIT Delhi

May 2025 – Nov 2025

B.Tech, Electronics & Communication Engineering | NIT Jalandhar

2015 – 2019
