Hiring Team

Advanced Store GmbH

Berlin, Germany

Re: Speculative Application – Full Stack Web Development & Data-Driven Technologies

Dear Advanced Store Team,

I came across your open application and it immediately resonated — not because of a specific job title, but because of what you described: programmatic advertising, e-commerce, performance marketing, and a team that moves with a start-up mindset. That's the kind of environment I've been building in for the past six years, and the kind I want to keep growing in.

What I'm good at is building digital products that are fast, data-driven, and built to scale. At Healthkart, I owned the promotions platform that powered the entire e-commerce engine across five consumer brands and two million monthly active users — from backend microservices and analytics pipelines to the frontend experience on high-traffic product pages. At UKG, I took that further by building the full deployment infrastructure, integrating AI-powered workflow automation, and shipping observable, reliable systems from day one. I work across the stack — Java on the backend, Angular and TypeScript on the frontend, Spark and Druid for data, and Datadog when something goes wrong at 2am.

Where I want to go is into the intersection of web technology and performance marketing — building the kind of data-driven systems that sit behind programmatic advertising, conversion optimisation, and digital growth. I'm genuinely curious about how tracking, attribution, and real-time bidding systems work under the hood, and I want to work at a company where engineering and marketing think together rather than separately.

Berlin and the Advanced Store team look like the right place for that. I'd love the chance to show you what I can bring — whether that's on the engineering side, the data side, or wherever the biggest need is. My CV is attached. I'm happy to jump on a call at any time that works for you.

Thank you for taking the time to read this.

Warm regards,

Davinderpal Singh
