PROFESSIONAL SUMMARY

Software engineer with 6+ years building and operating production CI/CD and release pipelines for distributed systems across multi-cloud environments (GCP and AWS). Designed and owned end-to-end release infrastructure at UKG — GitHub Actions pipelines, containerised deployments, automated validation gates, smoke tests, secrets management, and observability — cutting manual release steps by over 60%. Strong in Java, Python, Docker, Kubernetes, and Linux-based systems. Automation-first mindset: if an engineer is doing it manually, I build a system to do it instead. Open to relocation to Hyderabad.

WORK EXPERIENCE

Lead Software Engineer | UKG (Ultimate Kronos Group) | Jan 2025 – Present | Pune, India

- Owned and built end-to-end GitHub Actions CI/CD release pipelines across 4 environments (dev, stage, perf, prod) — automated image builds, validation checks, smoke tests, environment promotion, and rollback — reducing manual release steps by over 60% and making every deployment repeatable and auditable.
- Designed containerised multi-instance service deployments on Google Cloud Run (Docker/Kubernetes) with rollout, rollback, health-check automation, and multi-cloud artifact distribution; centralised secrets in Google Secret Manager with least-privilege IAM, rate limiting, and audit-ready logging — hardening release security and compliance across all environments.
- Built Datadog observability dashboards (p95/p99 latency, error rate, saturation) with k6 CI performance gates, catching regressions in ~30% of pre-production runs; led schema and ER design with Liquibase migrations and indexing strategies, improving query performance by over 35%.
- Orchestrated agentic automation workflows using n8n, Claude Code, and MCP Servers — eliminating repetitive engineering toil by over 50% and accelerating feature delivery; built Angular + TypeScript self-serve UI that cut operations support requests by over 40%.

Software Engineer | Healthkart | Oct 2022 – Dec 2024 | Gurgaon, India

- Owned a centralised promotions platform serving 2M+ monthly active users across 5 consumer brands (Healthkart, MuscleBlaze, HKVitals, TrueBasics, Gritzo) — built on Spring Boot microservices with Kafka event pipelines, Eureka service discovery, and OpenFeign; improved API response times by ~40% through Redis caching and Elasticsearch querying.
- Built Apache Spark and Druid data pipelines enabling real-time analytics 3x faster than previous batch processes; partnered across teams to drive consistent engineering practices and reliable deployments.

Software Engineer | Mahindra Comviva | Dec 2019 – Oct 2022 | Bangalore, India

- Built and maintained Java/Spring Boot backend services for a B2B SaaS loyalty platform supporting 10+ third-party integrations; managed Oracle schema migrations with Liquibase across 15+ releases with zero rollback incidents.

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, JavaScript, SQL, Bash

CI/CD & Release: GitHub Actions, Docker, Kubernetes, Helm, Terraform, artifact pipelines, smoke tests, rollout/rollback automation

Cloud & Infrastructure: GCP (Cloud Run, Secret Manager), AWS, multi-cloud artifact distribution

Observability & Testing: Datadog, Grafana, Splunk, k6, Playwright, Postman

Backend & Databases: Spring Boot, Microservices, Kafka, RabbitMQ, PostgreSQL, MongoDB, MySQL, Redis

AI & Automation: Claude Code, MCP Servers, n8n agentic workflows, GitHub Copilot

EDUCATION & CERTIFICATIONS

B.Tech in Electronics and Communication Engineering | NIT Jalandhar | 08/2015 – 07/2019

Certificate Programme in Applied Data Science and AI (In Progress) | IIT Delhi | 05/2025 – 11/2025
