PROFESSIONAL SUMMARY

Software engineer with 6+ years building foundational services and owning SaaS product delivery end-to-end across global enterprise and high-traffic consumer platforms. Deep expertise in Java and distributed systems, with hands-on experience integrating AI and LLM-powered capabilities into real product workflows — not just as a productivity shortcut, but as shipped features. I use Claude Code, MCP Servers, n8n, and GitHub Copilot as core parts of how I work daily, and have built agentic automation systems that reduced engineering toil by over 50%. Data-driven, cloud-native (AWS/GCP), and comfortable owning complex problems from architecture to production.

WORK EXPERIENCE

Lead Software Engineer | UKG (Ultimate Kronos Group) | Jan 2025 – Present | Pune, India

- Integrated AI-powered agentic workflows into the product using n8n, Claude Code, and MCP Servers — orchestrating LLM-driven automation pipelines that eliminated repetitive engineering tasks, reduced toil by over 50%, and accelerated feature delivery across the team. This was a shipped product integration, not a side experiment.
- Designed and built foundational deployment infrastructure for multi-instance backend services on Google Cloud Run — covering rollout/rollback automation, health checks, environment promotion, GitHub Actions CI/CD, and secrets management across 4 environments (dev, stage, perf, prod) — cutting manual release steps by over 60%.
- Built an Angular + TypeScript self-serve UI on top of workflow services, enabling operations teams to configure and trigger automated processes without engineering support — reducing support requests by over 40%.
- Instrumented full observability using Datadog (p95/p99 latency, error rate, saturation) with k6 performance gates in CI, catching regressions in approximately 30% of pre-production runs and ensuring every release was data-backed.

Software Engineer | Healthkart | Oct 2022 – Dec 2024 | Gurgaon, India

- Owned a centralised promotions and offers platform serving 2M+ monthly active users across 5 consumer brands (Healthkart, MuscleBlaze, HKVitals, TrueBasics, Gritzo) — designed as foundational shared infrastructure that every product team built on top of.
- Architected Spring Boot microservices with Kafka-driven event pipelines, AOP-based annotations, Eureka service discovery, and OpenFeign; improved API response times by approximately 40% through Redis caching and Elasticsearch-based querying.
- Built Apache Spark and Druid data pipelines enabling real-time analytics and personalisation features — delivering business insights approximately 3x faster than previous batch processes.

Software Engineer | Mahindra Comviva | Dec 2019 – Oct 2022 | Bangalore, India

- Built backend and UI features for a B2B loyalty SaaS platform using Java, Spring Boot, and JavaScript — owning end-to-end delivery across 10+ third-party integrations with fault-tolerant service design.
- Managed Oracle schema migrations with Liquibase across 15+ production releases with zero rollback incidents; delivered Metabase dashboards used by around 50 internal business users.

TECHNICAL SKILLS

Languages: Java, TypeScript, JavaScript, Python, SQL

AI & Automation: Claude Code, MCP Servers, n8n (agentic workflows), GitHub Copilot, Windsurf, LLM API integration

Frontend: Angular, React (familiar), HTML/CSS

Backend & Frameworks: Spring Boot, Spring Security, Hibernate, Node.js, REST APIs, Microservices, Kafka, RabbitMQ

Databases: PostgreSQL, MongoDB, MySQL, Redis, Elasticsearch

Cloud & Infrastructure: AWS, GCP (Cloud Run), Docker, Kubernetes, Terraform, Helm, Vault, GitHub Actions

Observability & Testing: Datadog, Grafana, Splunk, k6, Playwright, Postman

EDUCATION & CERTIFICATIONS

B.Tech in Electronics and Communication Engineering | NIT Jalandhar | 08/2015 – 07/2019

Certificate Programme in Applied Data Science and Artificial Intelligence (In Progress) | IIT Delhi | 05/2025 – 11/2025
