PROFESSIONAL SUMMARY

Java engineer with 6+ years designing and delivering scalable, fault-tolerant distributed systems across SaaS and enterprise platforms. Hands-on experience with Kafka-based event-driven architectures, Docker, Kubernetes, and AWS. Built security-critical infrastructure at UKG — secrets management, least-privilege access controls, and audit-ready logging. Comfortable owning projects end-to-end in fast-moving startup environments. Passionate about building systems that are both robust and secure.

WORK EXPERIENCE

Lead Software Engineer | UKG (Ultimate Kronos Group) | Jan 2025 – Present | Pune, India

- Designed and built a Java-based platform for deploying and managing distributed services on Google Cloud Run, with rollout, rollback, and health-check automation across 4 environments — handling fault tolerance and recovery as first-class requirements.
- Implemented security-hardened secrets management using Google Secret Manager: least-privilege IAM policies, secret rotation guardrails, sanitization controls, rate limiting, and audit-ready logging — reducing unauthorised access surface across all services.
- Automated CI/CD pipelines with GitHub Actions, cutting manual release steps by over 60% through image builds, validation gates, and smoke tests across dev, stage, perf, and prod.
- Built Datadog observability dashboards tracking p95/p99 latency, error rate, and saturation; integrated k6 performance gates into CI, catching regressions in approximately 30% of pre-production runs.
- Orchestrated agentic workflows using n8n and MCP Servers integrated with Claude Code, reducing repetitive engineering overhead by over 50% and accelerating feature delivery across the team.
- Led schema and ER design with Liquibase migration scripts and performance-oriented indexing, improving query performance by over 35% on core data access paths.

Software Engineer | Healthkart | Oct 2022 – Dec 2024 | Gurgaon, India

- Built and owned a centralised offer management service serving more than 2 million monthly active users across 5 consumer brands — designed for high availability, extensibility, and zero-downtime deployments.
- Architected Spring Boot microservices with Kafka-based event-driven communication, AOP custom annotations, and Eureka/OpenFeign service discovery, improving inter-service reliability across the platform.
- Reduced API response times by approximately 40% through Redis caching and Elasticsearch-based search, directly improving user-facing performance on high-traffic endpoints.
- Processed large-scale datasets using Apache Spark and Druid, enabling operational analytics around 3x faster than previous batch pipelines.

Software Engineer | Mahindra Comviva | Dec 2019 – Oct 2022 | Bangalore, India

- Developed backend features for a B2B loyalty management platform using Java and Spring Boot microservices, supporting over 10 third-party integrations with fault-tolerant service design.
- Managed Oracle schema changes and production migrations with Liquibase across more than 15 releases, achieving zero rollback incidents.
- Delivered operational dashboards in Metabase used by around 50 internal business users, improving platform visibility and reporting efficiency.

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, SQL

Frameworks: Spring Boot, Spring Security, Hibernate, Reactor

Databases: PostgreSQL, MongoDB, MySQL, Redis

Messaging & Streaming: Kafka, RabbitMQ, SQS

Cloud & Infrastructure: AWS, GCP, Docker, Kubernetes, Terraform, Helm, Vault

Security: Secrets management, IAM least-privilege, audit logging, rate limiting, AuthN/AuthZ

Observability: Datadog, Grafana, Splunk

AI & Automation: Claude Code, MCP Servers, n8n, GitHub Copilot

Practices: Event-driven architecture, microservices, CI/CD, fault-tolerant system design, startup delivery

EDUCATION

B.Tech in Electronics and Communication Engineering

NIT Jalandhar | Jalandhar, India | 08/2015 – 07/2019

CERTIFICATIONS & TRAINING

Certificate Programme in Applied Data Science and Artificial Intelligence (In Progress)

IIT Delhi | 05/2025 – 11/2025
